Use Case Design : DiscussAction

Event	Desired	Exception
User opens the application.	User is taken to a tabbed activity explaining what the app is and how it should be used.	If the user has already opened the application once before, they will be taken directly to the home page.
User wants to vote on topics.	User first opens the application and then taps on the "Vote Topics" button. The current conversation topics will be listed and can be voted on by tapping the vote button attached to the list objects.	If the voting stage has already come to a close, the "Vote Topics" button will not be usable.
User wants to vote on times and locations to talk about a topic.	User first opens the application and then taps on the "Vote Times" button. The current recommended times and locations will be defaulted, but the user can enter any time they wish.	If the external server closes time voting, the button will not be usable.
User wants to see the status of the current voting session.	User first opens the application and then taps on "Current Schedule". Information on the status of the voting stages will be here.	
User wants to add action items after a conversation.	User first opens the application and then taps on "Past Meetups". From this screen, the user will select the newest entry of this list. The user will be shown all current action items and will be given an option to create a new item.
